

Website Security

Lake Michigan PHRF Inc. DBA Midwest Performance Handicap Racing Fleet (MWPHRF)

MWPHRF utilizes SSL security (secure socket layer) that is invoked via HTTPS://. Secure Socket Layer provides encryption of all data transferred between the user's web browser and our server.

The MWPHRF website is hosted by Bluehost in a secure environment. Data is backed up and the backup is moved off-site to a secure location (Dropbox) each night.

Financial transactions are protected through the use of a commercial product (Hikashop) to manage the transaction process and utilizes Stripe as our payment processor. The use of Hikashop provides separation from the user's financial transaction from our in-house handicap certificate application. And Stripe adds another layer of security and is the only place where credit/debit card data is kept. Stripe is PCI compliant.
